# FAQs

How long is the program?

Having an FAQ section is a great way to present information about your training program. Using the question-and-answer format makes it more relatable for users.

Who is eligible?

Having an FAQ section is a great way to present information about your training program. Using the question-and-answer format makes it more relatable for users.

What if I miss a scheduled workshop?

Having an FAQ section is a great way to present information about your training program. Using the question-and-answer format makes it more relatable for users.

## Task #2: Usability Principles

### Solution:

#### 1. Consistency:

- **Where:** Across all pages, specifically the **color palette** (Electric Blue, Mint Green, and Purple) and **button styles** (rounded "Mint Green" buttons like "Start Learning" and "Read More").
- **Why:** Consistency reduces the user's learning curve. By making all clickable actions look identical, the user doesn't have to guess what is a button and what is just a decoration.

#### 2. Visibility:

- **Where:** The **Hero Section** (Figure 1) and **FAQ Section** (Figure 5).
- **Why:** Important information is placed prominently. The "Start Learning" button has high contrast against the blue background, making the primary call-to-action (CTA) immediately visible. In the FAQ, the questions are large and bold, ensuring users can find answers without digging through small text.

#### 3. Feedback

- **Where:** The **Navigation/Arrow Icons** on the "Learning Journey" (Figure 3) and **FAQ cards** (Figure 5).
- **Why:** In a real web app, these arrows indicate that the element is "expandable" or "clickable." They provide a visual cue (pre-emptive feedback) that more information is available, preventing the user from feeling stuck.

## Task #3: Human Information Processing

### Solution:

#### 1. Supports User Attention

- **Visual Hierarchy:** Your design uses size and color to direct the eye. In the Hero section, the large "Welcome" text is the first thing seen, followed by the secondary description, and finally the bright green button.
- **Directional Cues:** In the Hero image, the person is looking toward the center of the page/content. Naturally, humans follow the gaze of others, which pulls the user's attention into the text.

#### 2. Reduces Memory Load

- **Recognition over Recall:** Instead of making users remember what is in each module, you used **Image Cards** (Figure 2). The combination of a module number, a title, and a descriptive photo helps users recognize the topic instantly without having to memorize the syllabus.
- **Chunking:** The "Learning Journey" and "Learning Resources" sections break down complex information into three distinct "chunks" (cards). Humans process 3 to 4 pieces of information much better than a long list.

#### 3. Improves Understanding

- **Consistency of Symbols:** You used the same arrow icon across multiple pages. This creates a "mental model" once the user understands that an arrow means "go deeper," they understand how to navigate the entire site.
- **Plain Language:** Using clear headings like "What your learning journey looks like" and "FAQs" avoids technical jargon, making the purpose of each section immediately clear to any student.

## Task #4: HTML/CSS Implementation

### Solution:

The code is lengthy therefore I uploaded it to the GitHub repository

[Please Click to View Source code for the UI Mockup](#)
