

Open-Ended HCI Lab

Objective

The objective of this Open-Ended Lab (OEL) is to design an interactive prototype of your Final Year Project (FYP) idea using Figma and evaluate its usability using the Cognitive Walkthrough method.

Task Description

Each student is required to select their own FYP idea and create an interactive prototype in Figma. The prototype should represent the main functionality, user interaction flow, and interface design of the proposed system.

The designed prototype must include:

- Minimum 6 to 7 screens (Including login)
- Proper navigation between screens
- Interactive buttons/menus
- Consistent color scheme and typography

Part A: Prototype Design

Design the prototype in Figma and create a clickable interaction flow.

Part B: Cognitive Walkthrough Evaluation

After completing the prototype, perform a Cognitive Walkthrough evaluation.

You are required to:

1. Define at least 4 user tasks
2. Evaluate each task step-by-step
3. Identify usability problems
4. Suggest improvements

Use the following Cognitive Walkthrough questions during evaluation:

- Will the user know what to do?
- Will the user notice the correct action?
- Will the user understand the system response?
- Will the user successfully complete the task?

Submission Instructions

- Submit the report in `.doc` or `.docx` format.
- Submit both the Figma and GitHub links by copying and pasting them into the `.doc` or `.docx` file.
- Late submissions will not be accepted.
